LIVE THE CRIZAL® LIFE

CRIZAL SUNSHIELD™

Do Your Sunglass Lenses...

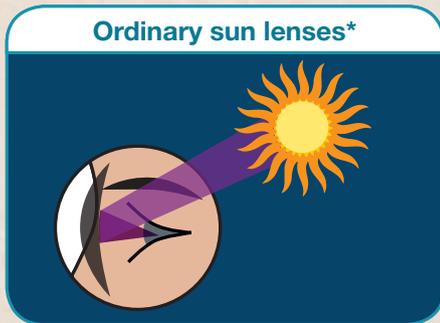

- Provide Total UV Protection?
- Eliminate Unwanted Glare?
- Protect Against Scratches & Smudges?

Crizal
SunShield™

Complete UV Protection

Did you know?

- Ordinary sunglasses do not provide complete UV protection.
- Ordinary sunglasses only offer UV protection from the front of the lens.
- Ordinary sunglasses do not protect you from UV reflections on the backside of the lens.

Harmful UV light—which hits the back of the lens—is reflected into the eyes.

That has changed with Crizal SunShield™ the first and only No-Glare sun lens offering 360° UV protection. By reducing backside UV reflections, Crizal SunShield provides you safer vision.

Backside UV reflections are reduced for 360° UV protection.

Eliminate Glare

On sunny days, your eyes need more protection. Crizal SunShield No-Glare lenses provide clearer and more comfortable vision by:

- Eliminating 99% of glare on the backside of the lens, providing greater comfort.
- Reducing unwanted reflections from the sun that cause eyestrain.

On ordinary sun lenses, light is reflected from the back surface, causing glare

With Crizal SunShield, glare is eliminated, and comfort increased

Protection For Your Sunwear

Sunglasses are more exposed to the elements than your regular glasses e.g. sweat, dirt, smudges, oils and more. The result—clear vision is compromised.

Crizal SunShield protects clear vision by resisting scratches and smudges, and repelling water and dust.

* Ordinary sun lens defined as a prescription polycarbonate polarized or tinted lens.
